

Kadó

Gift digital dollars to anyone, no wallet needed.

HackMeridian 2026 · Genesis · Stellar Unlocked · Built on Stellar testnet

THE PROBLEM

Today, receiving a gift starts with homework.

Step 1

Install a wallet app

Step 2

Guard a seed phrase

Step 3

Get XLM for fees

Step 4

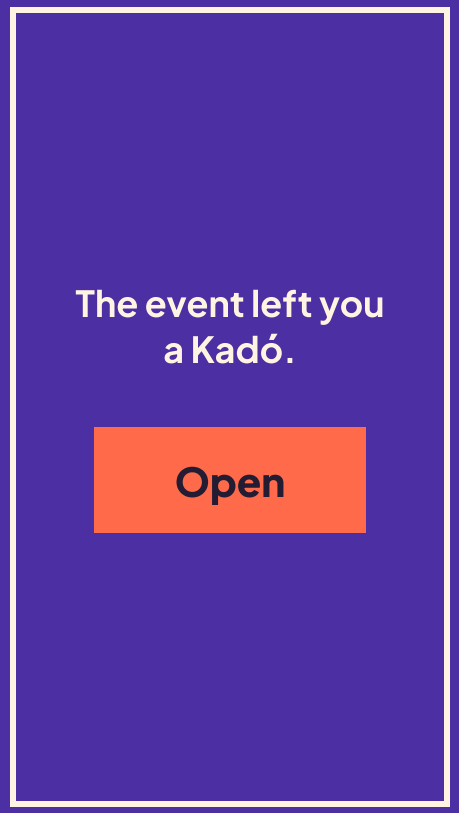

…then the gift

Almost nobody finishes the homework. At outreach events in Peru (meetups, workshops, university talks) people leave curious, but without an account and without funds.

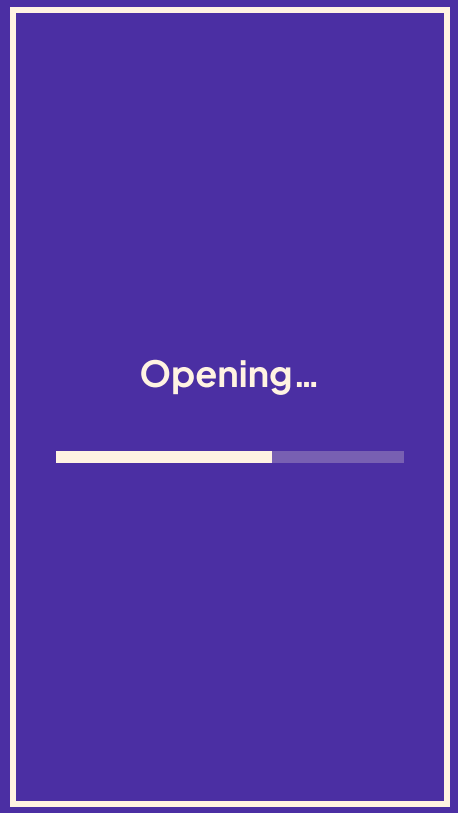

Builders already have wallets. **The people we want to reach don't.** Interest without conversion.

LIVE DEMO

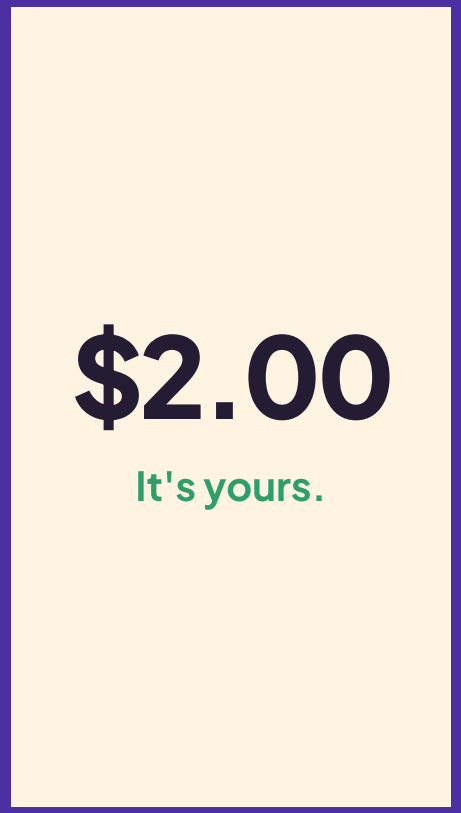

A code, one tap, a real Stellar account.

1 · Closed. Amount hidden.

2 · One transaction, ~5 s

3 · Funded account, verifiable

No app. No seed phrase. No email. No fee to pay.

- Link, QR or a typed code
- Receipt = the account on stellar.expert
- A second Kadó lands in the same account

kado-hackmeridian.vercel.app · demo codes in the README

HOW IT WORKS

Two native Stellar features. No smart contract.

Claimable balances · CAP-23

The gift waits on-chain for an account that doesn't exist yet. Unopened? It returns to the organizer after expiry.

Sponsored reserves · CAP-33

The organizer carries the new account's reserve, so the attendee starts at 0 XLM and the gift arrives whole.

Atomic: the account is created *and* the Kadó opens, or nothing happens. Retrying is always safe.

```
ONE TRANSACTION · 3 SIGNATURES

1 beginSponsoringFutureReserves          sponsor
2 createAccount (start 0)                sponsor
3 endSponsoringFutureReserves            attendee
4 claimClaimableBalance                  attendee

FEE + SEQUENCE: CHANNEL ACCOUNT POOL

tx 06d77fdc…620c                         testnet
```

No database: the code derives a key (scrypt), Horizon finds its balance, "opened" means the account exists.

FOR ORGANIZERS

Onboarding a person costs cents, and nothing is wasted.

≈$0.20

locked capital per new account (1 XLM reserve), on top of the gift

0

budget lost on no-shows: unopened Kadós come back

5 in 7 s

simultaneous opens on testnet, via a pool of 20 channel accounts

100%

on-chain metrics: open rate and time to open, read from Horizon

On-chain evidence (testnet): 30 Kadós in one tx `8f28e192…` · live open `c314a657…` · channel pool `48080fa7…`

Fees ≈ 0.00008 XLM per open · amounts at the event rate of 0.20 USD/XLM

WHAT'S NEXT

From a testnet demo to every outreach room.

Phase 1 · next

Pilot

Real events with the Stellar Ambassador Chapter Peru. Measure open rate, then mainnet with low amounts.

Phase 2

Person to person

Kadós sent by link. Non-custodial embedded wallet.

Phase 3

Spend it

Multiple assets and a real off-ramp.

VALIDATED

The primitive works end to end on testnet, live.

NOT YET

Real users. The pilot answers: do they keep it?

DECLARED

Custodial in this version. Bearer codes, fine in a room.

Gift digital dollars to anyone, no wallet needed.
